Importance: High

Hi Claudia,

We need to respond to the below inquiry from Patrick Traylor, Enforcement's high level political, by tomorrow mid-day. Chris Thompson, LEP Director, has requested something that includes the permitting thresholds. Do you think the attached presentation would be useful? We could point to slide 9. Do you have some other elementary reference paper we could draw from? I shared our last U&O briefing paper with Chris along with the comparison table to Utah's requirements back in December per his request for background info at that time but maybe they need something more basic.

Thanks,
Gail

Do you have anything that covers the highlighted request below? I won't share anything you provide unless you clear it first, but I need all the education I can get... Thanks!

Shall we provide Patrick the chart that Jess and Alex worked on for our audit initiative discussions?

Subject: Utah Air

Suzanne:

I'm looking forward to working with Region 8 staff on air matters in Utah.

One thing that I would find very helpful is a quick overview of the status of air permitting for O&G sources on the Uinta reservation. My notes from the last quarterly VTC are a little hazy; they say: "Because the Uinta Indian country is in non-attainment, there is no FIP and no applicable state permitting program, so we only have OOOO/OOOOa, for which there are only a handful of facilities." But the Region 8 website suggests that there *is* a minor NSR program in tribal non-attainment areas." See <https://www.epa.gov/caa-permitting/tribal-nsr-permits-region-8>. Now, I'll admit that I haven't

read the Indian Country FIP, but I thought Region 8 could give me a quick pointer on the enforceable minor NSR requirements for O&G in the U&O.

Thanks,
Patrick
